Lux Oasis Revenue-Share Staffing Model - 2026-07-02

Decision

Use a 20% acquisition upside only as **20% of Lux Oasis retained net profit from the unit they personally source/close**, not 20% of the full property net profit. A 20% share of full property net is too expensive for acquisition-only work when Lux Oasis may only retain 15-20% management economics.

Important terminology

This is the key distinction:

- **Full property net profit** = the whole profit of the apartment before the owner/Lux Oasis split. This mostly belongs to the owner in a revenue-share model.
- **Lux Oasis retained net profit** = only the Lux Oasis slice after owner payout and direct unit costs.

So the rule is not "no 20% of net profit" in general. The rule is:

- No to 20% of the full property net profit.
- Yes to 20-30% of Lux Oasis retained net profit, depending on the role.

Example: if a unit makes AED 10,000 net before owner split and Lux Oasis keeps 18%, Lux Oasis retained net profit is AED 1,800. A 25% partner share should be 25% of AED 1,800, not 25% of AED 10,000.

What the attached example shows

- JBR Murjan3 2301: owner share 85%, LOHH share about 15%, active months 14, average LOHH retained profit about AED 2,522/month.
- JBR Murjan2 UP01: owner share 82%, LOHH share about 18%, active months 7, average LOHH retained profit about AED 2,531/month.
- Combined positive-month average from the attached file: about AED 2,525 LOHH retained profit per unit per month before any acquisition-partner share or head-office staffing.

Recommended structure

- Property acquisition partner: 20% of LOHH retained net profit from units they personally source and help close, payable only after cash is collected and direct unit costs/owner payout are settled.
- Junior operations manager: fixed salary only when the portfolio contribution can cover it with buffer. Planning placeholder: AED 7,000/month.
- Player-manager/full-timer: do not hire fixed too early. Use variable upside first; consider fixed full-time only when the portfolio can cover junior ops plus the player-manager and still leave Damiano’s financial-freedom target intact.

Unit-count math

Assuming the 20% acquisition partner share is taken from LOHH retained profit:

Case	LOHH retained/unit before acquirer	After 20% acquirer	Units for AED 50k after no fixed hire	Units after AED 7k junior ops	Units after AED 19k junior + player-manager
Weak unit	AED 2,000	AED 1,600	31.2	35.6	43.1

Case	LOHH retained/unit before acquirer	After 20% acquirer	Units for AED 50k after no fixed hire	Units after AED 7k junior ops	Units after AED 19k junior + player-manager
Attached-file average	AED 2,525	AED 2,020	24.8	28.2	34.2
Good unit	AED 3,500	AED 2,800	17.9	20.4	24.6
Strong unit	AED 5,000	AED 4,000	12.5	14.2	17.2

Practical thresholds

- Before 5 units: avoid fixed payroll. Pay variable only, per closed/source unit.
- Around 5-8 decent units: junior ops can start making sense if the units are producing around AED 2.5k-3.5k/month each for LOHH and cash is stable.
- Around 15-25 strong revenue-share units: the full target becomes realistic, depending on unit quality and whether there is fixed payroll.
- If units average only AED 2k/month to LOHH, the target needs roughly 29 units even with only junior ops. That is too many unless acquisition velocity is strong.

Candidate message implication

For Syed Imran and similar candidates, sell the upside as: they can earn a share from units they personally bring and help close, but only on cash-collected, unit-specific net retained profit. Do not promise a fixed salary or a share of the whole company at this stage.

Addendum - Acquisition Plus Operations Role

If the person is not only sourcing properties but also onboarding, operating and managing the portfolio, use one unit-level performance pool instead of stacking separate uncapped commissions.

Recommended structure:

- Acquisition-only: 20% of LOHH retained net profit from units they personally source/help close.
- Acquisition plus active operations: 25% of LOHH retained net profit from units they personally source, help close, onboard and actively manage.
- Exceptional A-to-Z operator: up to 30% of LOHH retained net profit, but only after proof that they can source, close, onboard, manage guest/cleaning/owner operations and reduce Damiano's daily workload.
- Do not go above 30% unless there is no fixed salary, no separate ops cost, no company-level profit share, and the person is clearly driving enough acquisition velocity to justify it.

The share should be paid only after owner payout, direct property costs and collected cash. It should be unit-specific, not a share of the whole company.

If a helper is added under this person, keep the total people-share pool capped. The clean version is: the lead operator receives 25-30% and pays/manages their own helper from that pool, or Lux Oasis approves a separate junior ops cost only once the portfolio economics can support it. Do not pay 30% to the lead plus another 10% to a helper on the same unit unless the unit is unusually strong.

Economic reading from the current examples:

Share to acquisition/ops lead	LOHH kept from AED 2,525 average unit	Units for AED 50k before fixed payroll	Units after AED 7k junior ops
20%	AED 2,020	24.8	28.2
25%	AED 1,894	26.4	30.1

Share to acquisition/ops lead	LOHH kept from AED 2,525 average unit	Units for AED 50k before fixed payroll	Units after AED 7k junior ops
30%	AED 1,768	28.3	32.2
35%	AED 1,641	30.5	34.7

Best offer to start:

Offer 25% of LOHH retained net profit for units the person personally sources, helps close, onboards and actively manages, with a possible step-up to 30% only after a trial period and only for units where they are genuinely acting as A-to-Z operator. If they stop actively managing the unit, the ongoing share should step down to the acquisition-only level or expire after a defined period.

Addendum - Visa, Insurance And Cash Control

Current working assumption for sponsoring an acquisition/operations person in Dubai:

- Conservative onboarding budget per person: AED 8,000-10,000 for visa, medical, Emirates ID, insurance and admin/PRO buffer.
- Stressed budget per person: AED 12,000 if processing, insurance, typing/admin, amendments or setup costs run high.
- Do not treat visa affordability as the same as business affordability. The bigger risk is sponsoring too many people before they prove they can bring signed revenue-share units.

With AED 135,000 in the bank:

Protected cash reserve	Deployable cash	People at AED 8k each	People at AED 10k each	People at AED 12k each
AED 75,000	AED 60,000	7	6	5
AED 90,000	AED 45,000	5	4	3
AED 100,000	AED 35,000	4	3	2

Recommended decision:

- Sponsor 1 person first only if they are serious, Dubai-based, and can show real owner/agent access.
- Keep 2nd person as a staged option, not immediate, unless there is already a clear pipeline of signed or near-signed units.
- Do not sponsor 3+ people now from AED 135k cash. It may be technically affordable, but it weakens working capital before revenue is proven.
- If someone wants only visa/insurance and pure unit upside, that is attractive, but still use a 30-60 day proof period before committing sponsorship when legally possible.

Gate before sponsorship:

1. Candidate provides 5-10 real owner/agent leads or warm routes.

2. Candidate helps move at least 1-2 units to serious owner-interest/economics stage.

3. Role is written as unit-specific upside, not salary or company profit share.

4. Visa/insurance cost is treated as recoverable from future unit profit where legally and commercially appropriate, or offset by a vesting period.

The January 60-property claim should be treated as ambition, not forecast. The operating plan should underwrite against a slower path: first prove 1-3 units, then decide whether to sponsor more acquisition/ops people.

Addendum - Founder Draw Target

If Damiano keeps 50% of operating profit inside the business, then personal draw is half of true monthly operating profit after property costs, owner payouts, partner shares, staffing and company overhead.

That means:

- AED 50,000/month operating profit = AED 25,000/month Damiano draw and AED 25,000 retained.
- AED 80,000/month operating profit = AED 40,000/month Damiano draw and AED 40,000 retained.

So AED 40,000/month personal income is not the AED 50k/month business target. It requires about AED 80k/month true operating profit after costs and staffing.

Approximate unit count needed for AED 40k/month Damiano draw while retaining 50%:

Unit quality / partner structure	Net to LOHH per unit before fixed payroll	No fixed staff	AED 7k junior ops	AED 19k junior + manager
Average current example, no partner share	AED 2,525	32	35	40
Average current example, 25% source+operate share	AED 1,894	43	46	53
Average current example, 30% A-to-Z share	AED 1,768	46	50	57
Good unit, 25% source+operate share	AED 2,625	31	34	38
Strong unit, 25% source+operate share	AED 3,750	22	24	27

Practical interpretation:

- AED 25k/month personal draw is the realistic first financial-freedom target from AED 50k operating profit.
- AED 40k/month personal draw is a second-stage target requiring stronger units, more volume, or another profit line.
- If the portfolio is built mostly from average revenue-share units and partner shares, AED 40k/month draw likely needs 40-55 units, not 15-25.
- If the portfolio contains stronger units or higher-margin structures, the same draw can be reached closer to 22-35 units.

Addendum - Uploaded 2026 Operating Cost File

The uploaded `Businness_Monthly_Operational_Cost_2026_LOHH` Numbers file shows the following monthly operating-cost totals:

Month	Monthly cost
January 2026	AED 7,397.95
February 2026	AED 6,765.15
March 2026	AED 5,247.17
April 2026	AED 5,558.00
May 2026	AED 5,972.17
June 2026	AED 6,154.33

Working overhead:

- Jan-Jun average: AED 6,182/month.
- Mar-Jun average: AED 5,733/month.
- Practical rounded baseline before new fixed hires: about AED 6,000/month.

Main visible cost drivers include Lin VA at AED 2,120/month, licence/business fee equivalent around AED 816/month, office Ejari around AED 417/month, VAT/accounting AED 567/month, Hostaway AED 367/month, QuickBooks AED 108/month, Wio about AED 98/month, company phone AED 59/month, plus software, ads, cloud and miscellaneous costs.

Using the Mar-Jun AED 5,733/month overhead baseline:

Scenario	Unit contribution after partner share	Units for AED 25k draw	Units for AED 40k draw
Average current example, no partner share	AED 2,525	23	34
Average current example, 25% source+operate share	AED 1,894	30	46
Average current example, 30% A-to-Z share	AED 1,768	32	49
Good unit, 25% source+operate share	AED 2,625	22	33
Strong unit, 25% source+operate share	AED 3,750	15	23

The cost file improves the model slightly because current overhead is closer to AED 6k/month, but it does not change the core conclusion: AED 40k/month personal draw while retaining 50% requires about AED 80k/month true operating profit after overhead, staffing and partner shares.
