

Product Readiness Prompt

Controlled Beta · Inventory Board · Contracts Hub · Lovable Overnight Checklist

Control Tower saved

Private beta first

No broad launch

Product Wedge

Inventory Board is the daily-use wedge. Contracts Hub is the trust/content wedge. Do not overbuild AI before core marketplace use works.

Readiness Target

Close enough for Damiano review by 28 July 2026, and controlled outreach by 15 August 2026 if QA passes.

Current Risk

Serious operators may judge the product too early if it still feels like a beta builder app or makes strong legal claims.

Launch Rule

Prepare controlled private beta only. No public groups, ads, legal claims, payments or broad launch without approval.

1. Build Priorities

The shortest path to private-beta readiness.

1 · First Impression

Remove Lovable/builder artefacts. Make Dubai STR B2B marketplace clear in 10 seconds. Use Join Private Beta as primary CTA.

2 · Inventory Board

Users post, browse, filter, shortlist and inquire on inventory/opportunities. Admin can approve, reject, hide and feature posts.

3 · Role Flows

Operator, landlord, agent, co-host/property manager and service-provider signup must route to useful dashboards.

4 · Messaging

Inquiry from inventory/profile works. Inbox shows sender, company, role, related opportunity and timestamp.

5 · Contracts Hub

Use legal-safe wording, disclaimer and gated/manual beta access. No UAE-compliant or lawyer-reviewed claims before review.

6 · Admin And Privacy

Approval, moderation, reports, verification status, admin-only routes and private data protection must work.

2. Inventory Board And Role Dashboards

Make the marketplace usable before adding more ideas.

Inventory Board Fields

- Title, area/building, unit type, bedrooms and availability dates or gap nights.
- Opportunity type: landlord lead, operator inventory, co-host opportunity, service request or agent lead.
- Commercial model: revenue share, fixed rent, hybrid, service provider or referral.
- Posted-by role/company, contact action, status and verification status.

Required Actions

- Post an item, browse, filter, save, open details and send inquiry.
- Mark open, under discussion, closed or expired.
- Admin can approve, reject, hide, feature or edit items.
- A beta operator can post one item; another user finds it and sends an inquiry.

Role Dashboards

- Operator: Inventory Board, Contracts Hub, messages, saved opportunities and commercial needs.
- Landlord/owner: submit property/opportunity and view operator inquiries.
- Agent/service provider: submit routes or service profile, track inquiries and messages.

3. Contracts Hub And Trust

Useful, but legally safe until lawyer review.

Safe Wording

- Use: operator-focused templates and clause checklists to adapt with independent legal advice.
- Add: Nest Match is not a law firm. Templates are informational and must be reviewed by a qualified lawyer before use.
- Document states: draft, legal-review-ready, lawyer-reviewed later.
- Gated access/download with disclaimer acknowledgement.

Avoid

- Do not say UAE-compliant, legally valid, enforceable, lawyer-reviewed or safe to use before lawyer review.
- Do not claim DET/RERA/trade-licence verification is automatic unless it truly works.
- Do not claim marketplace liquidity exists before seeded supply/demand exists.
- Do not say AI agents are live unless they genuinely work.

First Template Categories

- Management/operator-owner addendum, STR sublease/operator protection addendum, early-termination clause pack, platform terms and intermediary disclaimer.

4. Overnight Lovable Checklist

What the Telegram bot should work on while Damiano sleeps.

- Inspect routes: homepage, signup/login, role onboarding, dashboards, Inventory Board, Contracts Hub, messaging, pricing/beta access and admin.
- Fix first impression: no builder artefacts, Dubai STR marketplace clear, Inventory Board and Contracts Hub explained, Join Private Beta primary.
- Fix legal wording: remove strong legal claims, add no-legal-advice disclaimer, label templates as operator-focused checklists.
- Make Inventory Board usable: post, browse, filter, detail, inquiry, admin approval and status controls.
- Make role signup/dashboards usable: collect name, company, role, email, WhatsApp, market and reason for joining.
- Make messaging honest: in-app inquiry works, external notifications only if truly built.
- Make payment/access honest: use private beta/manual approval if subscription is not ready.
- Add admin controls and verify privacy/security for dashboards, messages and admin routes.

5. Acceptance Gate

Morning pass/fail check.

Must Pass

- New operator signs up and lands in operator dashboard.
- New landlord signs up and submits a property/opportunity.
- Operator posts an Inventory Board item; another user filters and finds it.
- User sends inquiry; recipient sees and replies.
- Admin approves/rejects a user and an inventory post.
- Contracts Hub loads with legal-safe disclaimer and honest gating.
- Pricing/payment does not promise unavailable access.
- Mobile layout is clean, no Lovable artefacts remain, and no private data is exposed.

Morning Report Required

- Changed files/screens, URLs or screenshots, pass/fail per test, blockers, mocked/fake features and verdict: private-beta ready, not ready or blocked.
