

Full Website Readiness Audit

Live crawl · 44 routes · Lovable finish prompt

Live site checked

44 routes

Not launch-ready

Verdict

The website loads, but Nest Match is not ready for operator outreach yet. It needs a Lovable finish pass toward controlled private beta.

Biggest Blocker

Inventory Board is still Coming Soon, while Browse has no supply. This blocks the marketplace habit and operator readiness.

Main Copy Risk

Some pages still use global, AI, verified/review and legal-template claims that are too strong for the current stage.

Next Move

Give Lovable the finish prompt: live Inventory Board, seeded browse, safer copy, role QA, messaging, admin and privacy checks.

1. What Was Checked

Direct live-site crawl and bundle route review.

- Homepage, robots.txt, sitemap.xml and app bundle route extraction.
- Sitemap exposed 17 public URLs.
- Bundle and browser crawl covered 44 routes including public pages, registration, onboarding, Inventory Board, Contracts Hub, messages, dashboards, browse routes, payment result pages and password flows.
- All crawled routes returned HTTP 200, but many authenticated product routes only show login when logged out.
- No real user login, account creation, form submission, payment or data mutation was performed.

2. What Works

The site has a real foundation.

Public Pages

Homepage, How It Works, Pricing, FAQ, Get Started, Early Access, Terms, Privacy and SEO landing pages load.

Registration

General, landlord, agency, host/operator and service-provider registration/onboarding pages exist.

Auth Gating

Contracts, messages, dashboards, profile, notifications and browse subroutes redirect to login when logged out.

Legal Pages

Terms say Nest Match is not broker, property manager, legal advisor or party to user agreements. Privacy references UAE PDPL.

Important limitation

- Authenticated dashboards and actions are not proven until Lovable runs role test accounts.
- Payment success/cancel pages load directly, so session-context protection needs checking.
- Form submission and database/RLS rules still need end-to-end QA.

3. Critical Blockers

What prevents operator readiness.

- Inventory Board is still Coming Soon on `/inventory-board` and `/inventory-board/post`.
- `/browse` loads but shows no properties available right now.
- Homepage and footer still say global hospitality network/growth instead of focused Dubai STR B2B marketplace.
- Bundle contains strong Contracts Hub wording: professionally drafted UAE-compliant STR legal contract templates.
- Early Access says Coming Soon and Global Hospitality Network while SEO pages say Now live / early access open.
- SEO pages overclaim proof with vetted operators, verified reviews and real track records if those are not genuinely seeded.
- Payment success pages can be opened directly and appear to show successful/premium activation states.
- Logged-in dashboards, messaging, Contracts Hub access, admin approval and privacy/RLS are not verified.

4. Lovable Priority Order

Give the builder this order.

- 1. Make Inventory Board live: post, browse, filter, details, inquiry, status and admin moderation.
- 2. Fix Browse with seeded beta/demo supply or a strong beta empty state.
- 3. Clean public positioning to Dubai STR marketplace, not global hospitality network.
- 4. Make Contracts Hub legally safe: no UAE-compliant/lawyer-reviewed/legal-valid claims before review.
- 5. Make Early Access, SEO pages and CTAs consistent: Private Beta / Early Access.
- 6. Test role signup and dashboard routing for landlord, operator, agency, service provider and admin.
- 7. Prove inquiry/messaging and admin approval/moderation.
- 8. Protect payment success pages and beta/payment gating.
- 9. Verify privacy/security/RLS with test accounts.
- 10. Run mobile QA and return screenshots plus pass/fail report.

5. Acceptance Gate

Do not call it ready before these pass.

Private Beta Ready Only If

- Homepage is Dubai STR-specific and credible.
- Inventory Board works end to end.
- Browse is not dead-empty.
- Signup and role dashboards work.
- Messaging/inquiry works.
- Admin approval/moderation works.
- Contracts Hub claims are legally safe.
- Payment/beta access is honest.
- Mobile is clean.
- No user can access another user's private dashboards/messages.

Morning Output Required

- Changed files/routes, screenshots or URLs, pass/fail tests, mocked/incomplete features, privacy/security notes and final verdict.
