

Execution List

Week of 5 July 2026 · Report Desk · Proxy · Restart · Acceptance

COO record

Control Tower saved

One purchase only

Goal

Close the loop for the two-channel myDataValue agent: report retrieval in chat, Booking.com access, acceptance tests, then diagnosis brain.

Week Shape

One paste, one sub-USD 5 proxy purchase, one restart, one acceptance conversation, then the next build brief.

Spend Gate

Residential proxy is the only purchase. It remains approval-gated because it involves spend, account setup and credentials.

Friday End State

Report desk live, Booking.com route unlocked, rank/report/link tests passed, diagnosis join moving, pilot verdict scheduled.

1. Monday Build Order

The order stays deliberately narrow.

Step 1 · Report Desk

Paste ``BUILD: the report desk, any report on demand in chat`` into Claude Code. Reports become servable in chat: June monthly, daily and weekly.

Step 2 · Proxy

Buy one residential proxy and give Claude Code host, port, username and password for ``OTA_PROXY_URL`` in ``.env``.

Step 3 · Restart

``systemctl restart oasis-bot`` after Steps 1 and 2 are green. This activates the staged features in one move.

Step 4 · Acceptance

Ask three Telegram tests: Airbnb position, June monthly report, and one Booking.com listing link.

Step 5 · Diagnosis Join

After acceptance passes, COO writes the reasoning-layer brief for listing verdicts across price, visibility, quality, promotions and market.

Step 6 · Thu 10 Jul

Seven-day rank pilot verdict. If stable: rank line into daily brief and portfolio brief redesign for 20 properties.

2. Proxy And Restart Gate

Keep the spend small and the credentials controlled.

Purchase

- Decodo residential: about USD 3.50 for the entry gigabyte.
- IPRoyal pay-as-you-go: about USD 4.90 per gigabyte, no subscription.
- Budget line is under USD 5 per month and no other purchase is needed this week.
- Usage should be tiny at politeness caps, so one gigabyte should last months.

Credential Handling

- Collect host, port, username and password.
- Set only `OTA\_PROXY\_URL` in the server `.env`.
- Do not expose proxy secrets in logs, screenshots, PDFs or Control Tower text.
- The COO agent tracks the gate, but Damiano owns purchase and credential handoff.

Restart Activation

- On-demand Airbnb rank checks in chat.
- Completed health check: photos, amenities, recency and minimum stay.
- Booking.com end-to-end through the proxy.
- Report desk and approved monthly PDF cadence.
- Terminology fixes.

3. Acceptance And Thursday Verdict

Only call it live when the conversation proves it.

Acceptance Conversation

- `which position are we on Airbnb right now?` must return a real position with timestamp.
- `send me the June monthly report` must send the approved PDF.
- A pasted Booking.com listing link must be registered and scored.
- Damiano screenshots the pass/fail result for the COO record.

Diagnosis Join

- COO writes the Claude Code brief after all three acceptance tests pass.
- The reasoning layer returns one categorised verdict per listing.
- Categories: price, visibility, listing quality, promotions, market and OTA health.
- Each verdict needs confidence, missing data, recommended action and evidence source.

Thursday 10 July

- Seven days of rank readings complete.
- If stable, ship rank line into the daily brief.
- Then ship the portfolio redesign: short triage-style brief readable at 20 properties.

4. Waiting Items And Boundaries

What moves now, what waits, and what is gated.

Waiting

Ariel / PriceLabs reply remains pending. It may unlock Zuhair's extension scope and possibly free Airbnb data.

After Restart

Wellspring's three listings wire into the approved monthly template once the restart settles.

Deferred

Graph design pass waits until richer data exists. Do not spend design effort before the data layer improves.

Not This Week

No extra purchases. No PriceLabs write actions. No client-facing API claims until access and permissions are clear.

COO Rule

- Do not let this become a broad build list.
- Current week equals report desk, proxy, restart, acceptance, diagnosis join and Thursday verdict.
- Any failed acceptance test becomes the next Claude Code fix.
- The proxy is spend plus credentials, so it remains approval-gated.
