

# Conviva Commercial Proof Pack

Next-week presentation, PDF, video and proof-gathering priority.

---

## Conviva Commercial Proof Pack - Next Week Priority

Last updated: 2026-08-01

Purpose: turn the current inbound interest around guest communication into a proof-led Conviva commercial lane under Lux Oasis Advisory & Services LLC.

---

### Decision

Conviva is not only an internal guest-communication tool for Lux Oasis Holiday Homes. It can become a Lux Oasis Advisory & Services LLC income line for short-term-rental operators who need better guest communication, supervised replies, escalation control and operating visibility.

The commercial opportunity can include:

- Conviva implementation for other STR operators;
- supervised demo/pilot for guest communication;
- partner/referral route where someone with STR operator access introduces Conviva opportunities;
- a percentage-based upside model only after Damiano approves the exact terms.

Do not promise revenue share, percentages, implementation terms, pricing, partnership status or client access before Damiano approves the offer.

---

### Contact Follow-Up

Context: the Korean Airbnb contact based in Sechara reached out around guest communication and may be a useful Conviva path. Do not confuse this with Nicola / PriceLabs.

Status:

- Follow-up target: midweek, 2026-08-05.

- Reminder job: `fd2454fd-7072-442f-bf2d-f6cb03fc164c` .
- External follow-up: draft-only until Damiano approves.

Positioning for the follow-up:

Conviva is being built around real short-term-rental guest operations, starting from Lux Oasis Holiday Homes and then packaged through Lux Oasis Advisory & Services LLC for other operators.

The core idea is simple: support guest communication around check-in, access, maintenance, complaints, repeated booking questions and escalation cases, while keeping human control where the answer is sensitive or unclear.

We are preparing a deeper demo/presentation next week. If there is a collaboration angle with your operator/client base, we can look at Conviva as an implementation and referral opportunity rather than only a product demo.

---

## Next Week Priorities

Priority order:

- Presentation.
- PDF.
- Video.
- Outreach-ready follow-up draft after the proof pack is clear.

---

## Lin Evidence Task

Owner: Lin.

Lin should prepare screenshots and evidence, not publish anything.

Needed from Lin:

- current guest communication examples linked to the Korean Airbnb contact in Sechara if available;
- current guest conversations where Lux Oasis responded well;
- current guest conversations where the answer was slower, unclear, escalated or needed human judgement;
- screenshot set showing the message, the context, the actual reply and whether Conviva could have helped;
- hide or crop guest private details where possible before using in a public-facing deck;

- mark each screenshot as `good proof` , `needs improvement` , `sensitive/private` , or `not for deck` .

Minimum proof pack:

- 3 strong examples where a good answer improved guest experience;
- 2 examples where repeated questions or missing information created operational load;
- 1 escalation example showing why supervised mode is safer than full automation.

Prioritise these proof categories from the Murjan 3 live beta QA:

- access rescue when a guest is stuck at parking, entrance, reception, wrong building or access route;
- parking / entrance confusion where a simple exact landmark could solve the issue;
- pool-hours or amenity contradiction where live guest evidence overrides static policy;
- payment-link handling where the AI must escalate and never invent a link;
- booking modification, extension, pricing or checkout-date truth where the PMS/human source of truth matters;
- deleted, corrected or human-completed replies that prove supervised mode is honest and safer than full autonomy.

Capture both views when possible:

- guest-facing WhatsApp sequence;
- Chatwoot / operator-side view with sender labels, timestamps, escalation markers and resolution status.

If Lin or another human completed the answer, include that evidence. The commercial story should say `AI triage + human completion` , not pretend Conviva handled everything autonomously.

---

## Presentation Outline

Working title: `Conviva - Supervised Guest Communication For Short-Term Rental Operators`

Slides:

- Operator problem: guest communication does not scale cleanly.
- Where the pressure comes from: WhatsApp, check-in, access, maintenance, complaints and repeated questions.
- What Conviva does: answers from unit-specific knowledge and operator rules.

- What Conviva does not do: it does not guess, promise, refund, discount or handle sensitive cases without escalation.
  - Live operating proof: Lux Oasis Holiday Homes guest-message examples.
  - Shadow Mode: suggested reply, human review, learning and correction.
  - Escalation: risky, missing or unclear cases go to the team.
  - Implementation: property knowledge base, rules, WhatsApp flow, dashboard and QA.
  - Operator benefits: speed, consistency, visibility and less repetitive work.
  - Commercial pilot: 1-5 units, supervised, proof-first.
  - Partner/referral opportunity: for people with access to STR operators, subject to approved terms.
  - Next step: demo and operator fit check.
- 

## PDF Requirements

The PDF should be readable as a standalone sales/partner brief.

Include:

- one-page executive summary;
  - clear product explanation;
  - screenshots/evidence from Lin's prepared set;
  - supervised-mode guardrails;
  - implementation path;
  - pilot readiness gate;
  - collaboration/referral opportunity;
  - no guaranteed performance claims.
- 

## Video Requirements

Prepare two versions:

- **2-4 minute operator explainer** : product, problem, workflow, escalation and pilot.
- **60-90 second teaser** : useful for LinkedIn/Instagram/WhatsApp after Damiano approval.

Video must show:

- repeated guest question;
- Conviva checking unit knowledge;
- safe answer when information is known;

- escalation when information is missing or risky;
- dashboard/proof view;
- Lux Oasis Advisory & Services LLC as the commercial umbrella.

Do not record final public video until the dashboard flow is clean enough to show.

---

## Approval Gates

Green:

- prepare deck, PDF, script, storyboard, screenshots and Slack handoff;
- draft follow-up;
- update Control Tower and files.

Yellow:

- send follow-up to the contact;
- offer referral percentage or implementation terms;
- publish video, deck or social post;
- share guest screenshots externally.

Red unless Damiano gives exact instruction:

- sign partner terms;
- grant access to Conviva systems;
- share private guest data;
- accept legal/commercial commitments.
